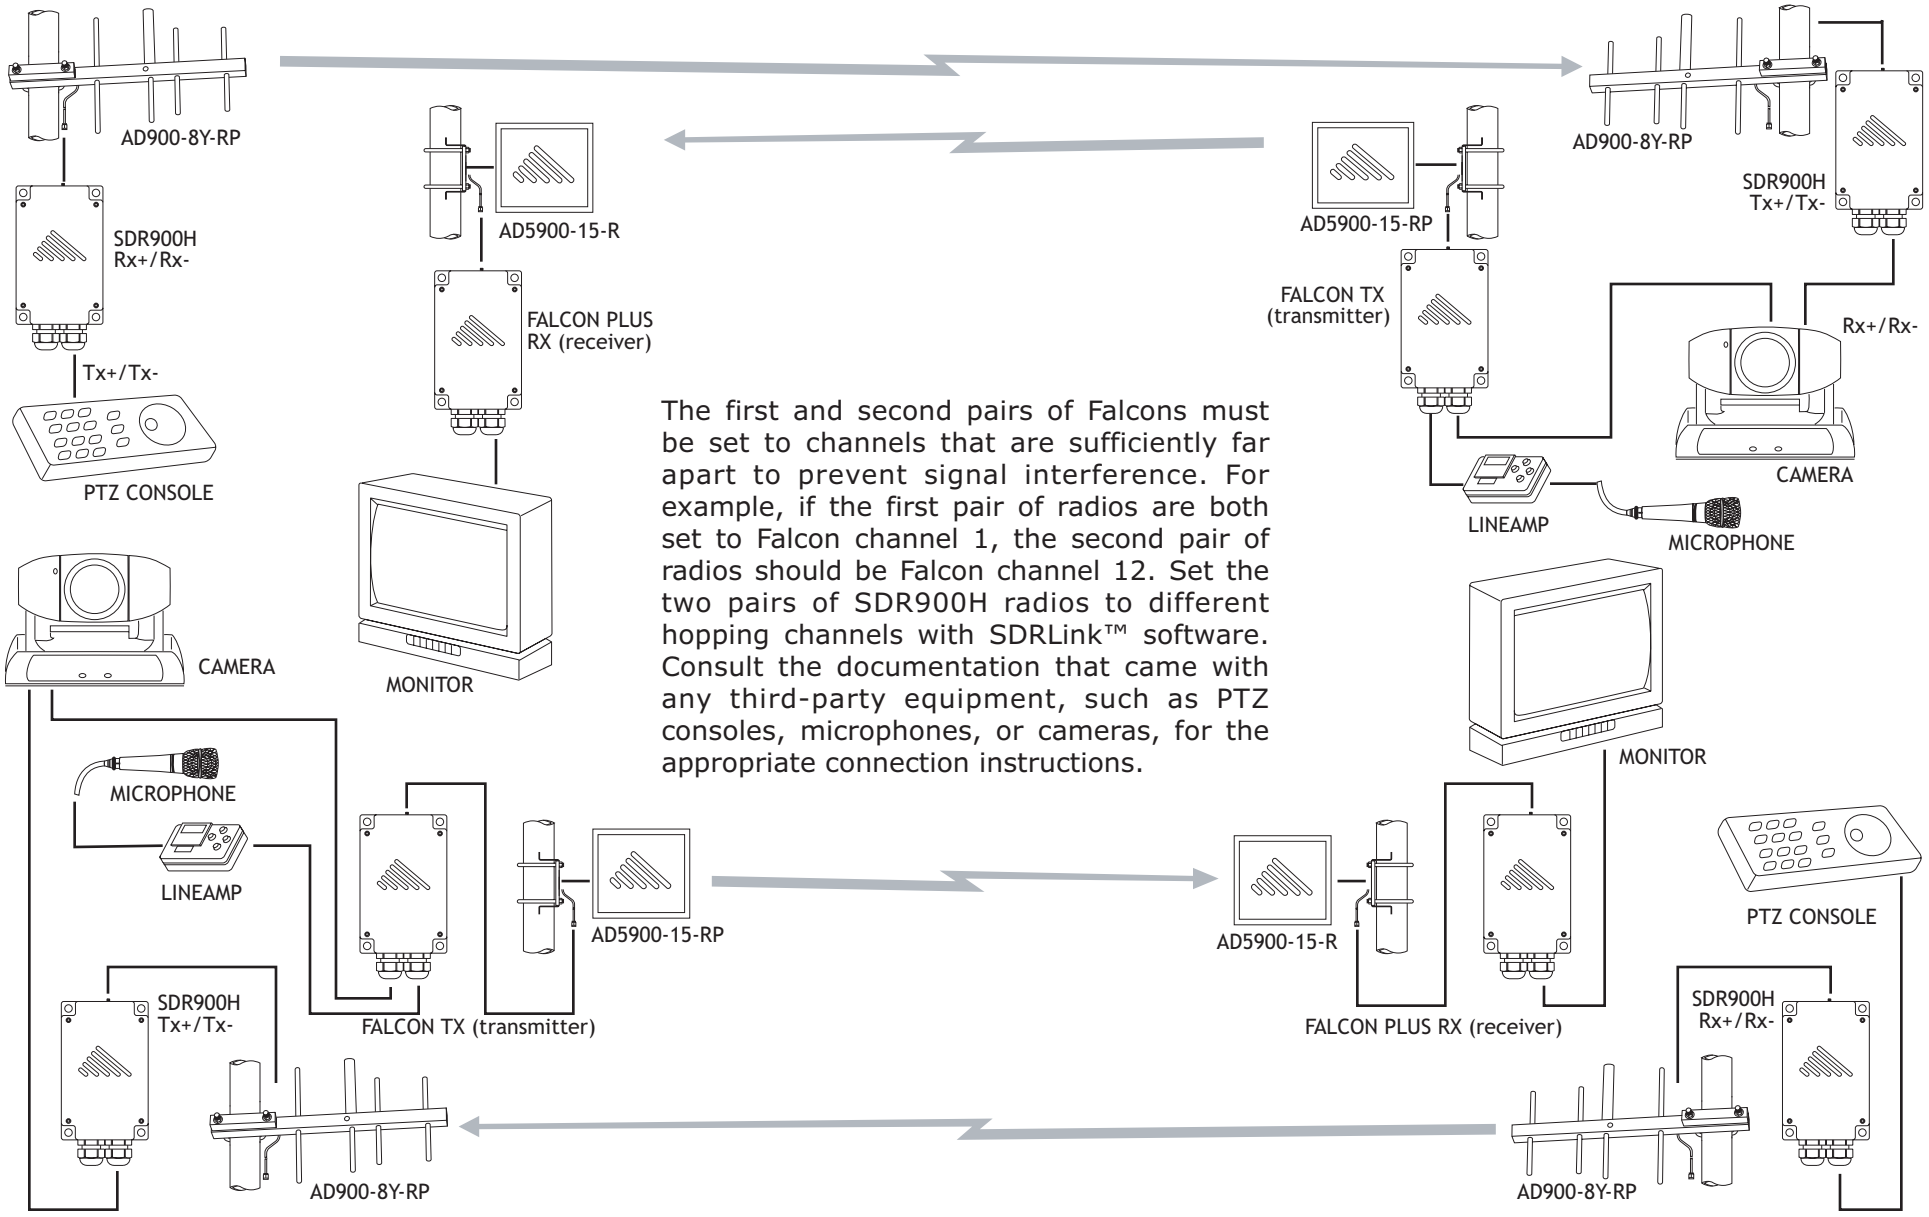
Trango Systems, Inc.

APPLICATION NOTE #1

Wireless Video Conferencing



The first and second pairs of Falcons must be set to channels that are sufficiently far apart to prevent signal interference. For example, if the first pair of radios are both set to Falcon channel 1, the second pair of radios should be Falcon channel 12. Set the two pairs of SDR900H radios to different hopping channels with SDRLink™ software. Consult the documentation that came with any third-party equipment, such as PTZ consoles, microphones, or cameras, for the appropriate connection instructions.
